The invention also relates to the use of adrenomedullin in the preparation of a drug for preventing premature birth or miscarriage. The composition of the invention can be used for preventing premature birth, preventing miscarriage, stopping delivery before caesarean section or for treating dysmenorrhoea. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Composition for inhibiting automatic uterine contraction or contraction caused by bradykinin comprises adrenomedullin
                                                                                                                                                                                                         Rat; adrenomedullin; precursor; bradykinin antagonist;
uterine contraction inhibitor; premature birth; miscarriage; abortion;

producing the fused
                                                                                       Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host -
                                                                                                                                                                                           The present invention describes a method (M1) for producing adrenomedullin precursor. The method comprises: (a) producing the fuse protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using recombinant host.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             4;
                                                                                                                                                                                                                                                                                                                                                                                                                 adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      adrenomedulin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedulin precursor. The method can be used for the production of adrenomedulin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 repersent sequences which are used in the exemplification of the present invention.

The present invention describes a method (M1) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications, AAH19806 to AAH19866 and AAB75110 to AAB75124 repersent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host.
                                                                                                                                                                                    for pharmaceutical and diagnostic fused adrenomedullin precursor using a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Adrenomedullin; glycine extended adrenomedullin; AM; AM-gly; adrenomedullin precursor; fusion protein; pharmaceutical; diagnostic.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes a method (MI) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment, and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host

The present invention describes a method (MI) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                          ö

-1- DISEASE: OWREN PARAHEMOPHILIA, AN HEMORRHAGIC DIASTESIS, IS DUE
TO A DEFICIENCY OF FACTOR V. OTHER DEFECTS IN FS RESULTS IN A
FORM OF THROMBOPHILIA KNOWN AS APC RESISTANCE (APCR). THE APCR
MUTATION IS FOUND IN ABOUT 5% OF THE POPULATION WHICH SUGGEST THAT
A SLIGHT THROMBOTIC TENDENCY MAY CONFER SOME ADVANTAGE IN FETAL
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     activated protein C.";
Nature 389:64-67(1994).

-:- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES

-:- FUNCTION: COAGULATION FACTOR V IS A COFACTOR THAT PARTICIPATES

WITH FACTOR XA TO ACTIVATE PROTHROMBIN TO THROMBIN.

-:- SUBMUNIT: Factor V as is composed of a heavy chain and a light chain, noncovalently bound. The interaction between the two chains is calcium-dependent.
                                                                                                                                            "Posttranslational sulfation of factor V is required for efficient thrombin cleavage and activation and for full procoagulant activity."; Biochemistry 33:6952-6959(1994).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ç
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    -!- DOMAIN: DOMAIN B CONTAINS 35 X 9 AA TANDEM REPEATS, AND 2 X 17 AA

Submitted (AuG-1997) to the EMBL/Genbank/DDBU databases.
-!- FUNCTION: DNA PRIMARE IS THE POLYMERASE THAT SYNTHESIZES SMALL
RNA PRIMERS FOR THE OKAZAKI FRAGMENTS MADE DURING DISCONTINUOUS
-!- SUBUNIT: HETERODIMER OF A SMALL SUBUNIT AND A LARGE SUBUNIT.
-!- SIMILARITY: BELONGS TO THE EUKARYOFIC PRIMASE SMALL SUBUNIT
FAMILY.

parathyroid hormone-related peptide receptor - mouse
C;Species: Mas musculus (house mouse)
C;Date: 13-Jan-1995 #sequence_revision 13-Jan-1995 #text_change 11-Jan-2000
C;Accession: S44203
R;Karperien, M.; van Dijk, T.B.; Hoot-jankers, T.; Cremers, F.; Abou-Samra, A.B.; Boon submitted to the EMBL Data Library, April 1994
A;Pescription: Expression pattern of parathyroid hormone/parathyroid hormone related A;Reference number: S44203
A;Accession: S44203
A;Accession: S44203
A;Status: preliminary
A;Molecule type: mRMA
A;Residues: 1-591 <ARP>
A;Residues: 1-591 <ARP>
A;Cross-references: EMBL:X78936; NID:g474828; PIDN:CAA55536.1; PID:g474829
C;Superfamily: glucagon receptor

hypothetical protein F28B23.2 - Arabidopsis thaliana
C;Species: Arabidopsis thaliana (mouse-ear cress)
C;Date: O2-Mar-2001 #sequence_revision 02-Mar-2001 #text_change 31-Dec-2001
C;Accession: H86389
R;Theologis, A.; Ecker, J.R.; Palm, C.J.; Federspiel, N.A.; Kaul, S.; White, O.; Alon Chin, C.W.; Chung, M.K.; Conn, L.; Conway, A.B.; Conway, A.R.; Creasy, T.H.; Dewar, ansen, N.F.; Hughes, B.; Huizar, L.
Nature 408, 816-820, 2000

         This invention relates to a composition for promoting passive elongation of vesicle smooth muscle. The composition contains adrenomedulin, and has uropathic activity. The composition can be used for promoting passive elongation of vesicle smooth muscles, this is useful for relieving urinary alsorders such as impending urinary incontinence, reflex urinary incontinence and urinary incontinence with overflow. The present sequence represents the human adrenomedulin protein, which is used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This invention relates to a composition for promoting passive elongation of vesicle smooth muscle. The composition contains adrenomedulin, and has uropathic activity. The composition can be used for promoting passive elongation of vesicle smooth muscles, this is useful for releving urinary disorders such as impending urinary incontinence, reflex urinary incontinence and urinary incontinence with overflow. The present sequence represents the porcine adrenomedulin protein, which is used in the composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Composition for promoting passive elongation of vesicle smooth muscle

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    inhibiting automatic uterine contraction or contraction caused by bradykinin. The invention also relates to the use of adrenomedullin in the preparation of a drug for preventing premature birth or miscarriage. The composition of the invention can be used for preventing premature birth, preventing miscarriage, stopping delivery before caesarean section or for treating dysmenorthoea. The present sequence represents porcine adrenomedullin precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                           Composition for inhibiting automatic uterine contraction or contraction caused by bradykinin comprises adrenomedullin
                                                                                                                                                                                                         Porcine; pig; adrenomedullin; precursor; bradykinin antagonist; uterine contraction inhibitor; premature birth; miscarriage; abortion; dysmenorrhoea; obstetric; gynaecological.

The composition contains adrenomedulin, and has uropathic activity. The composition can be used for promoting passive elongation of vesicle smooth muscles, this is useful for reliaving urinary disorders such as impending urinary incontinence, reflex urinary incontinence and urinary incontinence with overflow. The present sequence represents the porcine adrenomedulin rat, which is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Composition for promoting passive elongation of vesicle smooth muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           61 DSSPDAARIRVKRYRQSMNNFQGLRSFGCRFGTCTVQKLAHQIYQFTDKDKDNVAPRSKI 120

The present sequence is a polypeptide encoded by one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. 5' ESTs are derived from mRNAs with intact 5' ends and can therefore be used to obtain full length consone mapping procedures. They are used to obtain upstream regulatory sequences and to design expression and secretion vectors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Adrenomedullin; glycine extended adrenomedullin; AM; AM-gly; adrenomedullin precursor; fusion protein; pharmaceutical; diagnostic.
                                                                                                                                                                                                                                                                                         New nucleic acid that is a 5' expressed sequence tag (5' EST) for obtaining cDNAs and genomic DNAs that correspond to 5'ESTs and for diagnostic, forensic, gene therapy and chromosome mapping procedures
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 ARLDVASEFRKKWNKWALSRGKRELRMSSSYPTGLADVKAGPAQTLIRPQDMKGASRSPE 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a composition containing adrenomedullin for inhibiting automatic uterine contraction or contraction caused by bradykinin. The invention also relates to the use of adrenomedullin in the preparation of a drug for preventing premature birth or miscarriage. The composition of the invention can be used for preventing premature birth, preventing miscarriage, stopping delivery before caesarean section or for treating dysmenorshoea. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Composition for inhibiting automatic uterine contraction or contraction

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4,
                                                                                                                                                                                                                                                                          The present invention describes a method (MI) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 repersent sequences which are used in the exemplification of the present invention.
                                                                                                                                                          Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ø

                                                                 The present invention describes a method (M1) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell: (b) restricted digestion of the fused protein by a protease followed by collection of sediment: and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.

The present invention describes a modified therapeutic peptide (I) comparising a therapeutically active amino acid region (III) and a reactive group (II) (e.g. succinimidyl and malelmido groups) attached to a less therapeutically active amino acid region (IV), which covalently bonds with amino/hydroxyl/thiol groups on blood components to form a peptides stabilised therapeutic peptide composed of 3-50 amino acids. (I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various dissorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body woodifying therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                             Protection; endogenous therapeutic peptide; peptidase; conjugation; blood component; modification; succinimidyl; maleimido group; amino; hydroxyl; thiol; hormone; growth factor; neurotransmitter.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               74 YRQSMNNFQGLRSFGCRFGTCTVQKLAHQIYQFTDKDKDKDNVAPRSKISPQGY 125

adrehomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75124 represent sequences which are used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     rroducing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to antagonists of the vasoactive peptide calcitonin gene related peptide (CGRP) and other members of the CGRP superfamily. The invention also relates to amino the terminal modifications of peptides to improve their ability to bind to a member of the CGRP-receptor super-family. CGRP antagonists are used for inhibiting CGRP activity which can be used in vitro of in assays to identify and/or isolate CGRP receptors or with intect binding to its receptor. The present sequence is human adrenomedullin peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Vasoactive peptides useful for inhibiting calcitonin gene related
                                                                                                                                                                      Human; vasoactive peptide; calcitonin gene related peptide; CGRP; CGRP-receptor identification; adrenomedullin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           52

The present invention describes a method (MI) for producing darenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment: and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                  Gaps

SIMILARITY: BELONGS TO THE ABC TRANSPORTER FAMILY. MRP SUBFAMILY.
                                     SUBCELLULAR LOCATION: Integral membrane protein.
TISSUE SPECIFICITY: MAINLY EXPRESSED IN THE LIVER.
DISEASE: DEFECTS IN ABCC2 ARE A CAUSE OF HEREDITARY CONJUGATED
          Int. Hepatol. Commun. 292:292-299(1996).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

S-locus-specific glycoprotein - turnip (fragment)
N.Alternate names: S glycoprotein
N.Alternate names: S glycoprotein
C; Species: Brasslca rapa (turnip)
C; Species: Brasslca rapa (turnip)
C; Species: 20-Sep-1999 #sequence_revision 20-Sep-1999 #text_change 03-Nov-2000
C; Accession: T14423
R; Kusaba, M.; Nishio, T.; Satta, Y.; Hinata, K.; Ockendon, D.
Proc. Natl. Acad. Sci. U.S.A. 94, 7673-768, 1997
A; Title: Striking sequence similarity in inter- and intra-specific comparisons of clechanism.
A; Reference number: 218078; MUID:97352858
A; Accession: T14423
A; Accession: T14423
A; Status: preliminary; translated from GB/EMBL/DDBJ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A; Molecule type: DNA

(I) are useful for modifying therapeutic peptides e.g. hormones, growth factors and neurotransmitters, to protect them from peptidase activity in vivo for the treatment of various disorders. Endogenous therapeutic peptides are not suitable as drug candidates as they require frequent administration due to rapid degradation by peptidases in the body.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Modifying and attaching therapeutic peptides to albumin prevents peptidase degradation, useful for increasing length of in vivo activity
                                       producing the fused
                                   adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaccutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                               Protection; endogenous therapeutic peptide; peptidase; conjugation; blood component; modification; succinimidyl; maleimido group; amino; hydroxyl; thiol; hormone; growth factor; neurotransmitter.

Modifying and attaching therapeutic peptides to albumin prevents or reduces the action of peptidases to increase length of activity (half life) and specificity as bonding to large molecules decreases intracellular uptake and interference with physiological processes. AAB90829 to AAB92441 represent peptides which can be used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            calcitonin gene related peptide (CGRP) and other members of the CGRP superfamily. The invention also relates to amino the terminal modifications of peptides to improve their ability to bind to a member of the CGRP-receptor super-family. CGRP antagonists are used for inhibiting CGRP activity which can be used in vitro of in assays to identify and/or isolate CGRP receptors or with intact cells either in vitro or in vivo to inhibit the effect of CGRP binding to its receptor. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Vasoactive peptides useful for inhibiting calcitonin gene related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; vascactive peptide; calcitonin gene related peptide; CGRP; CGRP-receptor identification; adrenomedullin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

for pharmaceutical and diagnostic fused adrenomedullin precursor using a
                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method (MI) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications, AAH19806 to AAH19866 and AAB75110 to AAB75124 repersent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Adrenomedullin; glycine extended adrenomedullin; AM; AM-gly; adrenomedullin precursor; fusion protein; pharmaceutical; diagnostic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Linker peptide-adrenomedullin (AM) precursor protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a method (MI) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications, AAH19806 to AAH19866 and AAB75110 to AAB75124 repersent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host -

The present invention describes a method (M1) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention describes a method (MI) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment: and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 and AAB75110 to AAB75124 represent sequences which are used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                          Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Composition for promoting passive elongation of vesicle smooth muscle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Passive elongation; vesicle smooth muscle; uropathic activity;
                                                                                                                                                                                                                                                                                                                                                                                       The present invention describes a method (M1) for producing

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes a method (MI) for producing adrenomedullin precursor. The method comprises: (a) producing the fused protein using a recombinant host cell; (b) restricted digestion of the fused protein by a protease followed by collection of sediment; and (c) dissolving the sediment and extracting adrenomedullin precursor. The method can be used for the production of adrenomedullin precursor for pharmaceutical and diagnostic applications. AAH19806 to AAH19866 exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Producing adrenomedullin useful for pharmaceutical and diagnostic application comprises producing fused adrenomedullin precursor using a recombinant host.

                                      This invention relates to a composition for promoting passive elongation of vesicle smooth muscle. The composition contains adrenomedulin, and has uropathic activity. The composition can be used for promoting passive elongation of vesicle smooth muscles, this is useful for relieving urinary disorders such as impending urinary incontinence, reflex urinary incontinence and urinary incontinence with overflow. The present sequence represents the human adrenomedulin protein, which is used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a composition containing adrenomedullin for inhibiting automatic uterine contraction or contraction caused by bradykinin. The invention also relates to the use of adrenomedullin in the preparation of a drug for preventing premature birth or miscarriage. The composition of the invention can be used for preventing premature birth, preventing miscarriage, stopping delivery before caesarean section or for treating dysmenorthoea. The present sequence represents human adrenomedullin precursor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Composition for inhibiting automatic uterine contraction or contraction caused by bradykinin comprises adrenomedullin \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; adrenomedullin; precursor; bradykinin antagonist;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention relates to a composition for promoting passive elongation of vesicle smooth muscle. The composition contains adrenomedulin, and has uropathic activity. The composition can be used for promoting passive elongation of vesicle smooth muscles, this is useful for releving urinary disorders such as impending urinary incontinence, reflex urinary incontinence and urinary incontinence with overflow. The present sequence represents the porcine adrenomedulin protein, which is used in the composition of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Composition for promoting passive elongation of vesicle smooth muscle

                                                                                                                                                                                                                                                                                                                                                                                                                                                  ő
                                                                                                                                                                                                                                                                                            The invention relates to a composition containing adrenomedullin for inhibiting automatic uterine contraction or contraction caused by bradykinin. The invention also relates to the use of adrenomedullin in the preparation of a drug for preventing premature birth or miscarriage. The composition of the invention can be used for preventing premature birth, preventing miscarriage, stopping delivery before caesarean section or for treating dysmeorthoea. The present sequence represents porcine adrenomedullin precursor.
                                                                                                                                                                                                                                     Composition for inhibiting automatic uterine contraction or contraction caused by bradykinin comprises adrenomedullin
uterine contraction inhibitor; premature birth; miscarriage; abortion; dysmenorrhoea; obstetric; gynaecological.
                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps

```
The present invention describes a modified therapeutic peptide (I)

comprising a therapeutically active amino acid region (III) and a

reactive group (II) (e.g. succinimidyl and malelmido groups) attached to

a less therapeutically active amino acid region (IV), which covalently

bonds with amino/pydroxyl/thiol groups on blood components to form a

peptidase stabilised therapeutic peptide composed of 3-50 amino acids.

(I) are useful for modifying therapeutic peptides e.g. hormones, growth

in vivo for the treatment of various disorders. Endogenous therapeutic

peptides are not suitable as drug candidates as they require frequent

administration due to rapid degradation by peptidases in the body.

Modifying and attaching therapeutic peptides to albumin prevents or

reduces the action of peptidases to increase length of activity (half

info and specificity as bonding to large molecules decreases

and specificity as bonding to large molecules decreases
